

WOUND CLOSURE AND HEALING CATALOG

Our Credo

We believe our first responsibility is to the patients, doctors and nurses, to mothers and fathers and all others who use our products and services. In meeting their needs, everything we do must be of high quality. We must constantly strive to provide value, reduce our costs and maintain reasonable prices. Customers' orders must be serviced promptly and accurately. Our business partners must have an opportunity to make a fair profit.

We are responsible to our employees who work with us throughout the world. We must provide an inclusive working environment where each person must be considered as an individual. We must respect their diversity and dignity, and recognise their merit. They must have a sense of security, fulfilment and purpose in their jobs. Compensation must be fair and adequate, and working conditions clean, orderly and safe. We must support the health and well-being of our employees, and help them fulfil both their family and other personal responsibilities. Employees must feel free to make suggestions and complaints. There must be equal opportunity for employment, development and advancement for those qualified. We must provide highly capable leaders, and their actions must be just and ethical.

We are responsible to the communities in which we live and work, and to the world community as well. We must help people to be healthier by supporting better access and care in more places around the world. We must be good citizens – by supporting good works and charities, improving health and education, and bearing our fair share of taxes. We must maintain in good order the property we are privileged to use, protecting the environment and natural resources.

Our final responsibility is to our stockholders. Business must make a sound profit. We must experiment with new ideas. Research must be carried on, innovative programmes developed, investments made for the future and mistakes paid for. New equipment must be purchased, new facilities provided and new products launched. Reserves must be created to provide for adverse times. When we operate according to these principles, the stockholders should realise a fair return.

Selection and Use of Surgical Needles

Suture Selection

The needle type and size/shape are shown only for needle/suture combinations. A double needle image indicates a “double-armed” suture, that is, a suture with a needle attached to each end.

ATRALOC™ Surgical Needles

ATRALOC Needles are supplied in a variety of sizes, shapes and chord lengths. Surgeons should select the type of needle that, in their experience, is appropriate for the specific procedure and tissue.

Needle shapes are generally classified according to the degree of curvature of the body — 5/8, 1/2, 3/8, or 1/4 circle and straight — with taper, cutting, blunt points, or TAPERCUT® Surgical Needle tips.

In general, the same size of needle may be made from finer gauge wire for use in soft or delicate tissues and from heavier gauge wire for use in tough or fibrosed tissues (the surgeon’s choice).

Needle Type/Needle Shape Symbol

Needle type and needle shape are shown in this subhead.

Material

Suture materials are designated by color and construction characteristics (eg, Undyed Braided, Violet Braided, etc.).

Length

Suture length is shown in both inches and the approximate metric equivalent. Multi-strand (MS) means there is more than 1 strand of suture per package. For example: MS-2 means 2 strands per pack, MS-4 means 4 strands per pack.

The **CR** refers to **CONTROL RELEASE™ Needle Sutures**.

Product Name

Sutures and other Ethicon products are designated by trademarked and generic names.

Size

Suture size, denoting the diameter of the material, is in accordance with the United States Pharmacopeia (USP).

Needle Silhouette

Needle silhouettes are shown in ACTUAL SIZE. The designated number above the needle, within the Needle section, is the actual length measured in millimeters.

Code

Product codes ending in suffix G are packaged one dozen packets to a box. Product codes ending in suffix T are packaged two dozen packets to a box. Product codes ending in suffix H are packaged three dozen to a box. In the few instances where no alphabetic suffix is in the product code, the number of packets per box is identified by a footnote. The number of strands per multi-strand packet appears on the left of suture length. Primary suture packets do not have suffix G, H, or T.

Needle Length

Needle length is the measurement in millimeters of the length of the needle along the curvature. Ethicon has applied a rounding convention to all needle lengths. Needles less than 10 mm are rounded to the nearest tenth. Needles greater than 10 mm are rounded to the nearest whole number.

Types of Needles

Conventional Cutting Needle

Two opposing cutting edges, with a third on inside curve. Change in cross-section from a triangle cutting tip to a flattened body.

Conventional Spatula Needle

Visibility of the point at bottom provides control of depth penetration.

ETHIGUARD® Blunt Point Needle

Taper body. For blunt dissection and suturing friable tissue.

MICRO-POINT® Reverse Cutting Needle

Cutting edge on outer curve. Smooth & sharp for ophthalmic surgery.

MICRO-POINT® Surgical Needle (Spatula)

Thin, flat profile. Specially designed for ophthalmic anterior segment surgery.

Precision Cosmetic - Conventional Cutting PRIME® Needle

For delicate plastic or cosmetic surgery. Conventional cutting tip and PRIME geometry for increased sharpness in the tip leading to a flattened body.

Precision Point - Reverse Cutting PRIME® Needle

For plastic or cosmetic surgery, reverse cutting tip and PRIME geometry for increased sharpness in the tip.

Reverse Cutting Needle

Cutting edge on outer curve. For tough, difficult-to-penetrate tissues.

SABRELOC® Spatula Needle

Side-cutting spatula shaped edges. For layers of scleral or corneal tissue. Spatulated needle point is centered for maximum needle stability in thin sclera. Four equidistant and properly defined edges provide greater control.

TAPERCUT® Surgical Needle

Cutting tip, taper body. For tough tissue, like two needles in one.

Taperpoint Needle

For soft, easily penetrated tissues.

ULTIMA® Ophthalmic Needle (Spatula)

The smaller angles and increased cutting-edge length result in sharpness facilitating easy tissue penetration.

VISI-BLACK™ Surgical Needle

Surgical needles with a black surface finish to enhance visibility in the operative site.

Anatomy of a Needle

Needle Point

Needles can taper to a point or have cutting edges.

Taper Ratio

Longer points for improved penetration edges

Needle Body

Needle Flat

Flatted section for stability in the needle holder.

Ribs

In larger needles there is a ribbed section to provide a secure grip.

Square Body

Needles can also have a square body for increased strength.

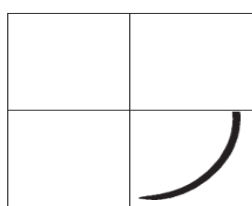

Swage

A hole is drilled into the end of the wire and the material is attached into this hole. For premium needles the needles are laser drilled which provides a smooth transition between needle and material thus reducing tissue trauma.

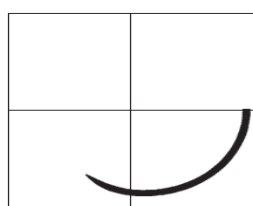

Needle Shape

The choice of needle shape is frequently governed by the accessibility of the tissue to be sutured, and normally the more confined the operative site the greater the curvature required. The basic shapes involved are:

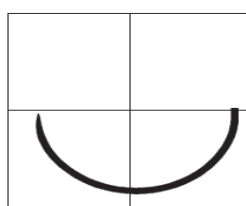

1/4 Circle

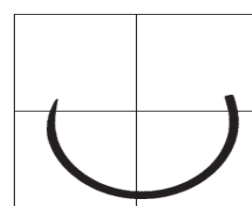

3/8 Circle

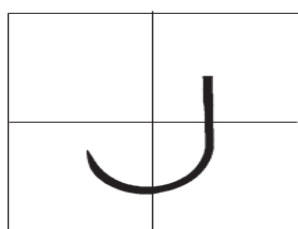

1/2 Circle

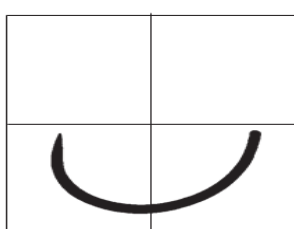

5/8 Circle

Ethicon Needles Sales Types

Tapercut®

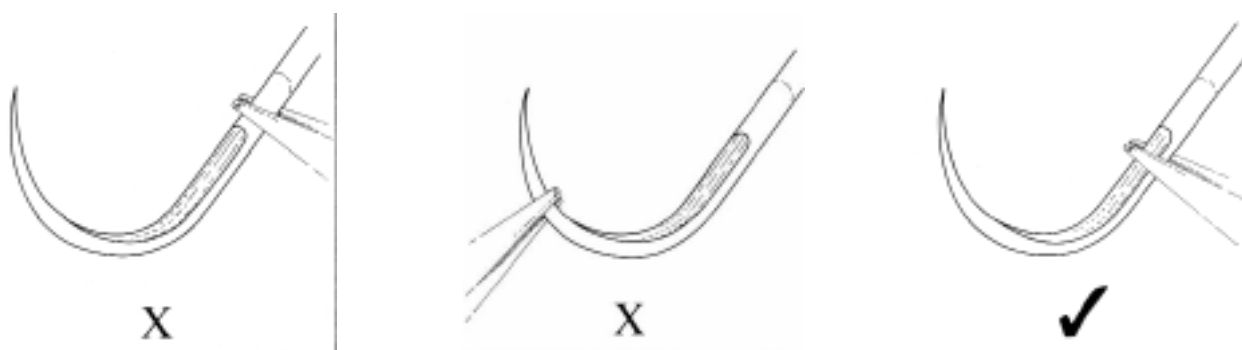

Blunt Point

Endoscopy

Use of Needle Holders

1. The needle holder should be carefully selected to match the size and strength of the needle to be used. The use of a needle holder larger than required can result in damage to the needle and in particular, distortion of the curvature.
2. The needle holder should be in good condition as worn jaws can result in needle rotation and instability in the needle holder. Nicks or defects in the needle holder jaws can also cause damage to the needle and loss of strength.
3. Needles should be grasped securely on the tip of the needle holder jaws.
4. Needles should only be held in the flatted area provided and should not be grasped on the attachment area or near to the needle point. Needles which are not flatted should be grasped for placement at a point approximately one third of the needle length from the butt. Excessive force should not be applied when gripping the needle, particularly with Tungsten Carbide jaw inserts, as this may damage the needle body and cause loss of strength or breakage.

Use of Surgical Needles

1. The force required to achieve passage of the needle through tissue should be applied in a direction following the curvature of the needle.
2. Care should be taken to match the size of the needle to the size of tissue bite required. The use of too small a needle for a given tissue bite can lead to bending.
3. Should the placement of the needle in tissue require to be readjusted, the needle should be removed and re-inserted. No attempt should be made to twist the needle in tissue.
4. The needles should normally be inserted separately into each side of the tissue to be approximated and should not be used to bridge a wound.

VICRYL™

(Polyglactin 910) Suture

ETHICON
Johnson & Johnson SURGICAL TECHNOLOGIES

SUTURE

Description

Synthetic, Absorbable, Coated, Braided
Some sizes are available as monofilament.

Absorption

Essentially complete between 56-70 days

Tensile Strength

Post implantation	Approximate % of original strength remaining
14 days	75%
21 days	50% (6-0 and larger) 40% (7-0 and smaller)
28 days	25% (6-0 and larger)

Colour

Violet or undyed

Range

10-0 to 6 (USP). Supplied as needled sutures and ligatures. Size 10-0 and some codes in 9-0 are monofilament in structure.

Indications

VICRYL* sutures are intended for use in soft tissue approximation and/or ligation, including use in ophthalmic surgery, peripheral nerve adaptation and microsurgery for vessels less than 2 mm in diameter. The safety and effectiveness of VICRYL™ sutures in cardiovascular tissue have not been established.

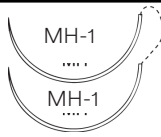

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions

VICRYL™ PLUS

(Polyglactin 910) Suture

SUTURE

Description	Synthetic, Absorbable, Coated, Braided, Antibacterial	
Absorption	Essentially complete between 56 and 70 days	
Tensile Strength	Post implantation	Approximate % of original strength remaining
	14 days	75%
	21 days	50%
	28 days	25%
Colour	Violet or undyed	
Range	5-0 to 2 (USP). Supplied as needled sutures and ligatures.	
Indications	VICRYL™ Plus sutures are intended for use in soft tissue approximation and/or ligation, except for ophthalmic, cardiovascular and neurological tissues.	

Protection against bacterial colonization

- Plus Antibacterial Sutures have been shown in vitro to inhibit bacterial colonization of the suture for 7 days or more and are effective against the most common organisms associated with SSIs^{†1} Staphylococcus aureus, Staphylococcus epidermidis, MRSA, MRSE, Escherichia coli*, K pneumoniae*.
- Plus Sutures were associated with a nearly 30%** reduction in the risk of surgical site infection.²

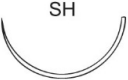

**Refers to VICRYL™ Plus, MONOCRYL™ Plus and PDSTM Plus sutures only in NICE 2021 Guidance MTG59

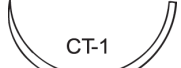

*PDS™ Plus Antibacterial (polydioxanone) Suture and MONOCRYL™ Plus Antibacterial (poliglecaprone 25) Suture only.

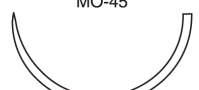

αBased on benchtop testing and clinical effect is unknown

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions

VICRYL™ RAPIDE

(Polyglactin 910) Suture

SUTURE

Description

Synthetic, Absorbable, Coated, Braided

Absorption

Essentially complete by 42 days

Tensile Strength

Post implantation Approximate % of original strenght remaining

5 days 50%

10-14 days 0%

VICRYL* Rapide suture typically falls off 7-10 days post - operative or can be wiped off subsequently with sterile gauze. Normally, the removal of the suture is not required.

Colour

Undyed or violet

Range

8-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications

- VICRYL Rapide is intended for use in soft tissue approximation where only short term wound support is required and where the rapid absorption of the suture would be beneficial.
- Due to its absorption profile VICRYL Rapide is useful for skin closure, particularly in pediatric surgery, episiotomies, circumcision and closure of oral mucosa.
- VICRYL Rapide is also successfully used in ophthalmic surgery for conjunctival sutures.

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

MONOCRYL™

(Polyglecaprone 25) Suture

SUTURE

Description	Synthetic Absorbable, Monofilament	
Absorption	Essentially complete between 91 and 119 days	
Tensile Strength	Post implantation	Approximate % of original strength remaining
	7 days	60% (violet) 50% (undyed)
	14 days	30% (violet) 20% (undyed)
	21 days	0% (undyed)
	28 days	0% (violet)
Colour	Violet or undyed	
Range	6-0 to 1 (USP). Supplied as needed sutures and ligatures.	
Indications	MONOCRYL* sutures are intended for use in general soft tissue approximation and/or ligation, but not for use in cardiovascular or neurological tissues, microsurgery or ophthalmic surgery.	

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

MONOCRYL™ Plus

(Polyglecaprone 25) Antibacterial Suture

SUTURE

Description

Synthetic, Absorbable, Monofilament, Antibacterial

Absorption

Essentially complete between 91 and 119 days

Tensile Strength

Post implantation	Approximate % of original strenght remaining
7 days	60% (violet) 50% (undyed)
14 days	30% (violet) 20% (undyed)
21 days	0% (undyed)
28 days	0% (violet)

Colour

Violet or undyed

Range

6-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications

MONOCRYL* Plus sutures are intended for use in general soft tissue approximation and/or ligation where an absorbable material is indicated.

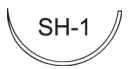

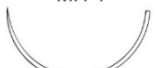

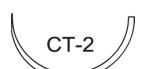

Protection against bacterial colonization

- Plus Antibacterial Sutures have been shown in vitro to inhibit bacterial colonization of the suture for 7 days or more and are effective against the most common organisms associated with SSIs^{†1} Staphylococcus aureus, Staphylococcus epidermidis, MRSA, MRSE, Escherichia coli*, K pneumoniae*.
- Plus Sutures were associated with a nearly 30%** reduction in the risk of surgical site infection.²

**Refers to VICRYLTM Plus, MONOCRYLTM Plus and PDSTM Plus sutures only in NICE 2021 Guidance MTG59
*PDS™ Plus Antibacterial (polydioxanone) Suture and MONOCRYL™ Plus Antibacterial (polyglecaprone 25) Suture only.
†Based on benchtop testing and clinical effect is unknown

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

PDS™ II

(Polydioxanone) Suture

SUTURE

Description

Synthetic, Absorbable, Monofilament

Absorption

Essentially complete between 182 and 238 days

Tensile Strength

Post implantation	Approximate % of original strength remaining
14 days	80% (3-0 and larger) 60% (4-0 and smaller)
28 days	70% (3-0 and larger) 40% (4-0 and smaller)
42 days	60% (3-0 and larger) 35% (4-0 and smaller)

Colour

Violet or undyed

Range

7-0 to 2 (USP). Supplied as needled sutures and ligatures.

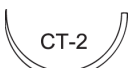

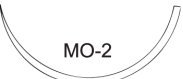

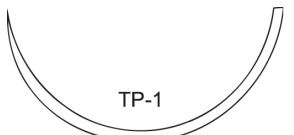

Indications

- PDS™ II sutures are intended for use in general soft tissue approximation, including use in pediatric cardiovascular tissue, in microsurgery and in ophthalmic surgery.
- PDS™ II sutures are particularly useful where the combination of an absorbable suture and extended wound support (up to 6 weeks) is desirable.

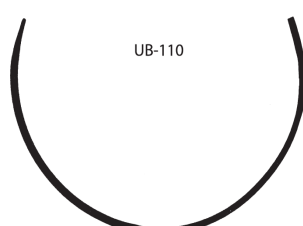

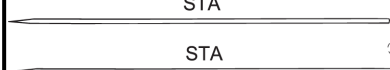

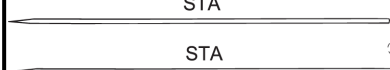

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

PDS™ Plus

(Polydioxanone) Antibacterial
Monofilament

SUTURE

Description	Synthetic, Absorbable, Monofilament, Antibacterial	
Absorption	Essentially complete between 182 and 238 days	
Tensile Strength	Post implantation	Approximate % of original strenght remaining
	14 days	80% (3-0 and larger) 60% (4-0 and smaller)
	28 days	70% (3-0 and larger) 40% (4-0 and smaller)
	42 days	60% (3-0 and larger) 35% (4-0 and smaller)
Colour	Violet or undyed	
Range	6-0 to 1 (USP). Supplied as needled sutures and ligatures.	
Indications	- PDS™ Plus Antibacterial Sutures are intended for use in general soft tissue approximation, including use in paediatric cardiovascular tissue, and in ophthalmic surgery (other than contact with cornea and sclera). - PDS™ Plus Antibacterial Sutures are particularly useful where the combination of absorbable suture and extended wound support is desirable. - Plus Antibacterial Sutures have been shown in vitro to inhibit bacterial colonization of the suture for 7 days or more and are effective against the most common organisms associated with SSIs^{†1} Staphylococcus aureus, Staphylococcus epidermidis, MRSA, MRSE, Escherichia coli*, K pneumoniae*. - Plus Sutures were associated with a nearly 30%** reduction in the risk of surgical site infection.²	

Protection against bacterial colonization

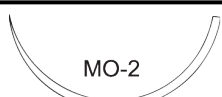

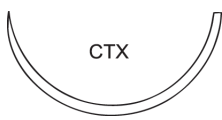

**Refers to VICRYL™ Plus, MONOCRYL™ Plus and PDS™ Plus sutures only in NICE 2021 Guidance MTG59
†PDS™ Plus Antibacterial (polydioxanone) Suture and MONOCRYL™ Plus Antibacterial (poliglecaprone 25) Suture only.

‡Based on benchtop testing and clinical effect is unknown

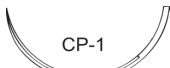

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

PROLENE™

Monofilament Polypropylene

SUTURE

Description

Synthetic, Non-absorbable, Monofilament

Colour

Blue or clear

Range

10-0 to 2 (USP). Supplied as needled sutures, armed with, for example, EVERPOINT* Tungsten-Rhenium needles, VISI-BLACK* needles, MULTIPASS* needles or CC-needles. Also available with pledgets.

PROLENE* sutures are also available as HEMO-SEAL* Needles Suture combination, in which the diameter of the suture and the needle wire have been more closely aligned to reduce the degree of needle-hole bleeding.

Indications

PROLENE* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

ETHILON™

(Polymide 6) Suture

SUTURE

Description

Synthetic, Non-absorbable, Monofilament

Colour

Black, green or clear

Range

11-0 to 2 (USP). Supplied as needled sutures armed with, for example, MULTIPASS* and PRIME* needles. ETHILON* is also available as ligatures.

Indications

ETHILON* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures.

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

ETHILON* Monofilament Polyamide 6

ETHIBOND™ Excel

(Polybutylate Coated Polyester) Suture

SUTURE

Description **Synthetic, Non-absorbable, Coated, Braided**

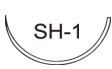

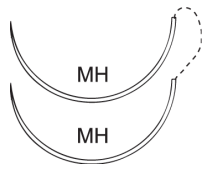

Colour **Green or white**

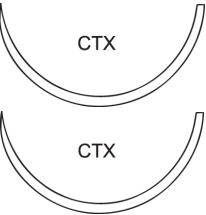

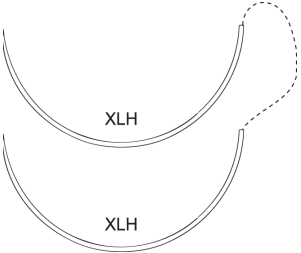

Range **6-0 to 6 (USP). Supplied as needled sutures or ligatures. With or without pledgets.**

Indications **ETHIBOND* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures.**

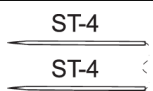

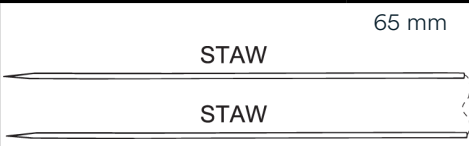

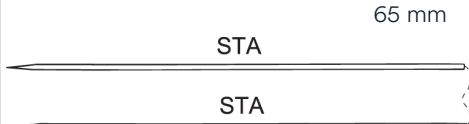

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

MERSILENE™

(Polyester) Multifilament Suture

SUTURE

Description	Synthetic, Non-absorbable, Braided
Colour	Green or white
Range	11-0 to 3 (USP). Supplied as needled sutures or ligatures. Sizes 10-0 and 11-0 are monofilament in structure.
Indications	MERSILENE* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures, and also for the fixation of soft tissue to bone tissue.

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

MERSILK/PERMA-HAND™

(Braided Silk) Suture

SUTURE

Description **Natural, Non-absorbable, Coated, Braided or Twisted**

Colour Black or white. Twisted virgin silk is dyed blue.

Range 8-0 to 5 (USP). Supplied as needled sutures or ligatures. Size 8-0 is manufactured of virgin silk and are twisted in construction. Virgin silk fibres are held together by natural gum secreted by the silk worm. Braided silk is coated with wax or silicone.

Indications SILK sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures.

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

PRONOVA™

(Poly(hexafluoropropylene-VDF)) Suture

SUTURE

Description

Synthetic, Non-absorbable, Monofilament

Colour

Blue

Range

8-0 to 2-0 (USP). Supplied as needled sutures, armed with, for example, VISI-BLACK® needles or CC-needles.

Indications

PRONOVA® sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular and neurosurgical procedures.

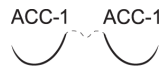

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

STEEL

Monofilament and Multifilament Suture

ETHICON

Johnson & Johnson SURGICAL TECHNOLOGIES

STAINLESS STEEL
Monofilament and Multifilament

SUTURE

Description **Non-absorbable, Monofilament or Twisted**

Colour Undyed

Range 4-0 to 7 (USP). Supplied as needled sutures and ligatures.

Indications

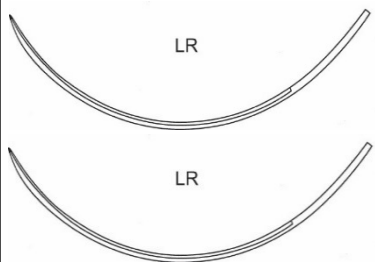

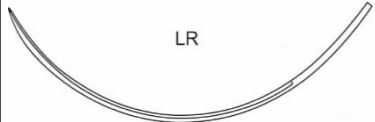

Stainless steel sutures are intended for use in abdominal wall closure, hernia repair, sternal closure and orthopedic procedures including cerclage and tendon repair.

These sutures are contraindicated in patients with known sensitivities or allergies to stainless steel, or constituent metals such as chromium and nickel.

Please refer always to the Instructions for use/package insert that follows with the device for the most current and complete instructions.

PROLENE™ Polypropylene Mesh

Product description

Mesh Key Facts	
Core mesh material	PROLENE™ Polypropylene Mesh The polypropylene polymer is identical to the material used in PROLENE™ Suture.
Pore size	1 mm
Partially Absorbable	No
Weight	76 g/m ²
Customizable	Yes, may be trimmed according to surgeon's discretion
Shelf life	5 years
Tissue Separating Barrier	None
Procedure	• Open Umbilical hernia repair • Open & Lap Inguinal hernia repair • Open Ventral hernia repair PROLENE™ Mesh should not be used intraperitoneally.

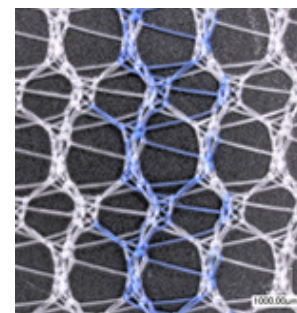

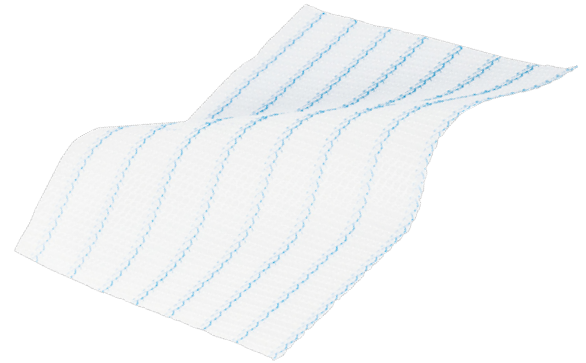

Product information

Product code	Mesh size	Shape	EA/BOX
PML1	30 x 30 cm	Square	Sterile, 1 per box
PML3	30 x 30 cm	Square	Sterile, 3 per box
PMM1	15 x 15 cm	Square	Sterile, 1 per box
PMM3	15 x 15 cm	Square	Sterile, 3 per box
PMN3	15 x 10 cm	Rectangle	Sterile, 3 per box

PMP3	10 x 12 cm	Rectangle	Sterile, 3 per box

PROLENE™ Polypropylene Mesh

Product description

Mesh Key Facts	
Core mesh material	PROLENE™ Polypropylene Mesh The polypropylene polymer is identical to the material used in PROLENE™ Suture.
Pore size	Vertical: 3.5 mm Horizontal: 2.5 mm
Partially Absorbable	No
Weight	44 g/m ²
Customizable	Yes, may be trimmed according to surgeon's discretion*
Shelf life	5 years
Tissue Separating Barrier	None
Procedure	• Open Umbilical hernia repair • Open & Lap Inguinal hernia repair • Open Ventral hernia repair PROLENE™ Soft polypropylene Mesh should not be used intraperitoneally.

Product information

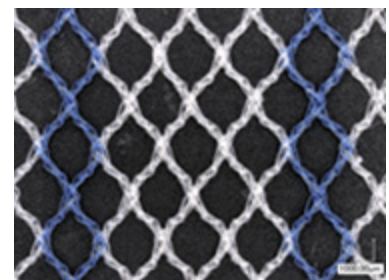

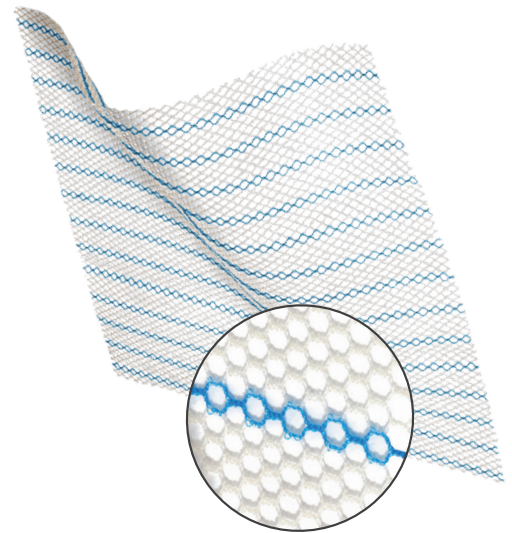

Product code	Mesh size	Shape	EA/BOX
SPMII	7.6 x 15 cm	Rectangle	Sterile, 6 per box
SPMH	15 x 15 cm	Square	Sterile, 6 per box
SPMLI	25 x 25 cm	Square	Sterile, 3 per box
SPMXXL	30.5 x 35.6 cm	Rectangle	Sterile, 3 per box
SPM3XL	50 x 50 cm	Square	Sterile, 3 per box

*The surgeon should provide the necessary overlap to reduce the risk of recurrence. The use of thermal cutting devices is not recommended, because it has not been tested.

ULTRAPRO™ Partially Absorbable Mesh

Product description

Mesh Key Facts	
Core mesh material	Absorbable poliglecaprone-25 monofilament fiber (MONOCRYL) and nonabsorbable polypropylene monofilament fiber (PROLENE Polypropylene suture)
Pore size	3.2 mm
Partially Absorbable	Yes, MONOCRYL (Poliglecaprone 25), USP #5-0
Weight	Before Absorption: 58 g/m ² After Absorption: 28 g/m ²
Absorption time*	91 days
Customizable	Yes, may be trimmed according to surgeon's discretion†
Shelf life	5.5 years
Tissue Separating Barrier	None
Procedure	• Open Umbilical hernia repair • Open & Lap Inguinal hernia repair • Open Ventral hernia repair ULTRAPRO™ Mesh should not be used intraperitoneally.

Product information

Product code	Mesh size	Shape	EA/BOX
UMR3	7.6 x 15 cm	Rectangle	Sterile, 3 per box
UMM3	15 x 15 cm	Square	Sterile, 3 per box
UML1	30 x 30 cm	Square	Sterile, 1 per box
UMN3	10 x 15 cm	Rectangle	Sterile, 3 per box
UMP3	10 x 12 cm	Rectangle	Sterile, 3 per box
UMT1	15 x 30 cm	Rectangle	Sterile, 1 per box

* The absorbable portion of the mesh is absorbed in approximately 91 days, leaving the nonabsorbable portion remaining for the lifetime of the patient unless removed.

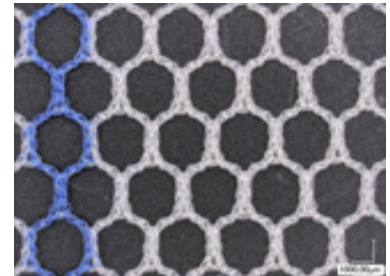

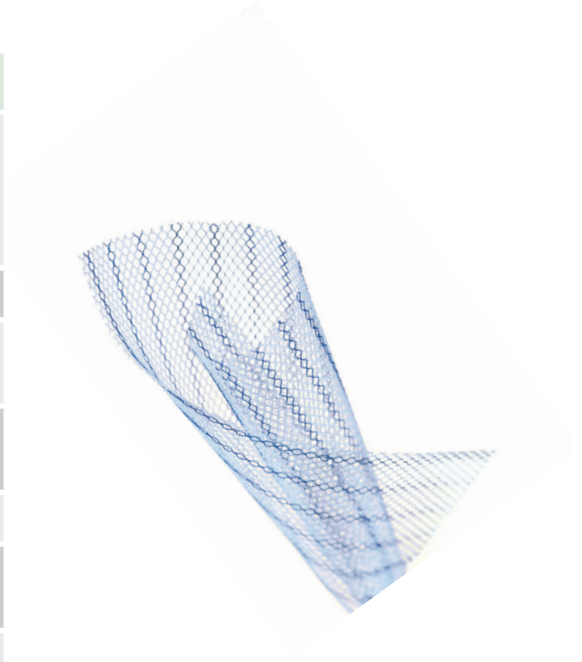

† The surgeon should provide the necessary overlap to reduce the risk of recurrence. The use of thermal cutting devices is not recommended, because it has not been tested.

ULTRAPRO ADVANCED™ Macroporous Partially Absorbable Mesh

Product description

Mesh Key Facts	
Core mesh material	Absorbable poliglecaprone-25 monofilament fiber (MONOCRYL) and nonabsorbable polypropylene monofilament fiber (PROLENE Polypropylen suture)
Pore size	2.8 mm
Partially Absorbable	Yes, MONOCRYL (Poliglecaprone 25), USP #5-0
Weight	Before Absorption: 71.1 g/m ² After Absorption: 39.1 g/m ²
Absorption time*	91 days
Customizable	Yes, may be trimmed according to surgeon's discretion
Shelf life	2 years
Tissue Separating Barrier	None
Procedure	• Open Umbilical hernia repair • Open & Lap Inguinal hernia repair • Open Ventral hernia repair ULTRAPRO ADVANCED™ Mesh should not be used intraperitoneally.

Product information

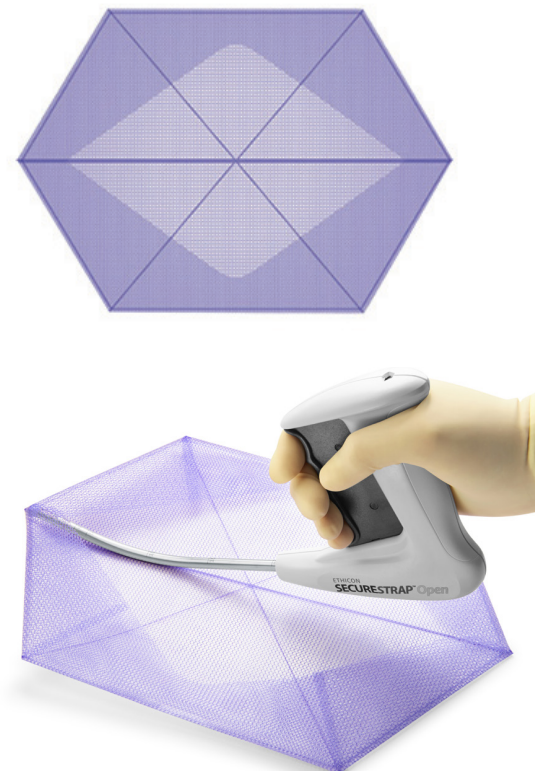

Product code	Mesh size	Shape	EA/BOX
UPA37615	7.6 x 15 cm	Rectangle	Sterile, 3 per box

UPA3030	30 x 30 cm	Square	Sterile, 1 per box

* The absorbable portion of the mesh is absorbed in approximately 91 days, leaving the nonabsorbable portion remaining for the lifetime of the patient unless removed.

ETHICON PHYSIOMESH™ OPEN Flexible Composite Mesh Device

Product description

Mesh Key Facts	
Core mesh material	PROLENE™ Polypropylene and PDS™ polydioxanone fibers, laminated to an absorbable poliglecaprone 25 film
Pore size	2.4 mm
Partially Absorbable	Yes, poliglecaprone 25 polymers
Weight	Before Absorption: 62 g/m ² After Absorption: 30 g/m ²
Absorption time	PDS™ 6 months
Customizable	N/A
Shelf life	2 years
Tissue Separating Barrier	Yes
Procedure	Open Ventral hernia repair

Product information

Product code	Mesh size*	EA/BOX
OPHY1010	10 x 10 cm	Sterile, 1 per box
OPHY1215	12 x 15 cm	Sterile, 1 per box
OPHY1520	15 x 20 cm	Sterile, 1 per box
OPHY1525	15 x 25 cm	Sterile, 1 per box
OPHY2030	20 x 30 cm	Sterile, 1 per box
OPHY2536	25 x 36 cm	Sterile, 1 per box

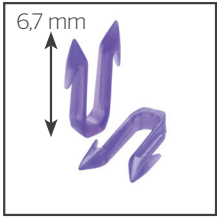

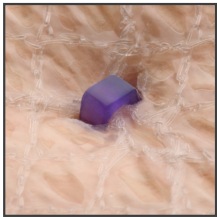

*As per Instructions for Use, ensure that the ETHICON PHYSIOMESH™ Open device used is large enough to extend approximately 3 to 5 cm beyond the margins of the hernia defect to provide adequate overlap onto healthy fascia.

ETHICON SECURESTRAP™

Absorbable Fixation Device

Product description

Key Facts	
Description	SECURESTRAP™ Absorbable Fixation Device contains 25 or 12 synthetic absorbable straps, preloaded into the device 36 cm long shaft. The device is designed for introduction and use through a 5 mm or larger laparoscopic port sleeve
Material	SECURESTRAP™ Absorbable Fixation Device straps are made of a blend of polydioxanone and L(-)-lactide/glycolide copolymer dyed with D&C violet No. 2. The inserted length of the strap is 6.7mm.
Absorption time	12-18 months
Shelf life	2 years
Procedure	Fixation of prosthetic material to soft tissues in various minimally invasive and open surgical procedures

Product information

Product code	# straps	EA/BOX
STRAP25	25 straps per device	Sterile, 6 per box
STRAP25R	25 straps per device	Sterile, 1 per box
STRAP12	12 straps per device	Sterile, 6 per box

ETHICON SECURESTRAP™ OPEN

Absorbable Fixation Device

Product description

Key Facts	
Description	The ETHICON SECURESTRAP™ Open Fixation Device is a trigger-squeeze mechanical device with a curved cannula, pre-loaded with 20 absorbable straps. The tip of the device is designed to facilitate the placement of prosthetic material and straps.
Material	SSECURESTRAP™ Absorbable Fixation Device straps are made of a blend of polydioxanone and L(-)-Lactide/glycolide copolymer dyed with D&C violet No. 2. The inserted length of the strap is 6.7mm.
Absorption time	12-18 months
Shelf life	2 years
Procedure	Fiixation of prosthetic material to soft tissues in open surgical procedures

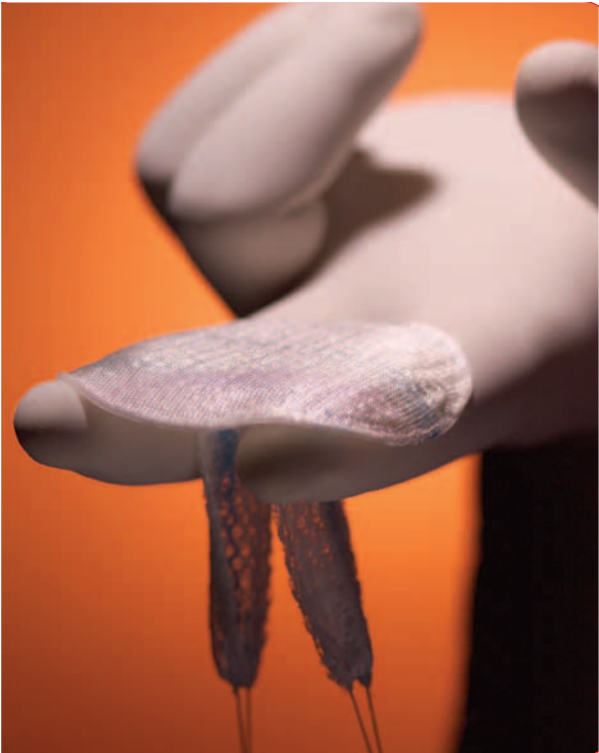

Product information

OPSTRAP20R	20	Sterile, 1 per box
OPSTRAP20	20	Sterile, 6 per box

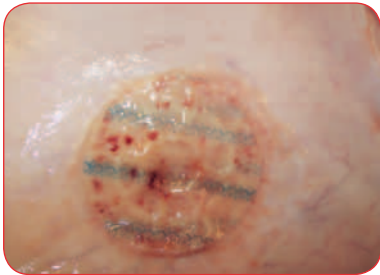

PROCEED™
Ventral Patch - PVP™

PROCEED* Ventral Patch (PVP) is a self-expanding, partially absorbable, flexible laminate mesh device designed for the repair of hernias and other fascial deficiencies such as those caused by trocar use.

The mesh patch is comprised of multiple layers of absorbable and nonabsorbable materials, laminated together with an absorbable polydioxanone polymer and is available in different sizes.

PVP™ upon deployment

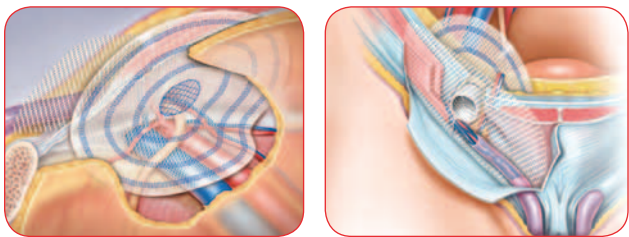

PVP™ at 14 days

Dimensions	Packaging	Product Code
4.3 cm x 4.3 cm	2 per box	PVPS
6.4 cm x 6.4 cm	2 per box	PVPM

ULTRAPRO™
Hernia System, UHS

For open inguinal hernia repair.

UHS Posterior and Anterior view

- 3-in-1 device for the combined anterior and posterior open repair of groin hernias
- Onlay patch covers the inguinal canal floor.
- Connector - secures the underlay which virtually eliminates migration.
- Underlay - provides posterior support.

Dimensions		Packaging	Product Code
Onlay Patch	width: 6 cm length: 12 cm	3 per box	UHSM Medium
Underlay Patch	diameter: 7,5 cm		
Onlay Patch	width: 6 cm length: 12 cm	3 per box	UHSL Large
Underlay Patch	diameter: ~10 cm		
Onlay Patch	width: 6 cm length: 12 cm	3 per box	UHSOV Oval
Underlay Patch	width: ~10 cm length: 12cm		

VICRYL™ Mesh

VICRYL™ (polyglactin 910) Mesh is a synthetic absorbable sterile copolymer made from glycolide and L-lactide. The copolymer is identical in composition to that used in VICRYL™ (polyglactin 910) synthetic absorbable suture.

VICRYL™ Mesh is intended for use as a buttress to provide temporary support during the healing process.

VICRYL™ Mesh may be used wherever temporary wound or organ support is required, particularly in instances in which compliant and stretchable support is desired. VICRYL™ Mesh may be cut to the shape or size desired for each specific application.

Dimensions	Packaging	Product Code
6 X 5 CM	3 per box	VM605

HEMOSTATS

From Ethicon Biosurgery

Adjunctive hemostats with a safety profile established over more than 60 years.⁹

Demonstrated in vitro bactericidal activity against the most common pathogens (MRSA, MRSE, VRE, PRSP, E. coli).^{*10}

Built on a Legacy of Clinical Performance¹¹

A product from the SURGICEL™ Family of Absorbable Hemostats is used somewhere in the world every 2.1 seconds.¹²

*Pre-clinical test data are not necessarily indicative of clinical performance

The SURGICEL™ family has been used more than 150 million times worldwide¹³

SURGICEL™ Original Absorbable Hemostat

After SURGICEL™ haemostat has been saturated with blood, it swells into a brownish or black gelatinous mass which aids in the formation of a clot, thereby serving as a haemostatic adjunct in the control of local haemorrhage.

New code	size
1901SK	5cm x 35cm
1902SK	10cm x 20cm
1903SK	5cm x 7.5cm
1906SK	1.25cm x 5cm

SURGICEL™ NU-KNIT™ dense material provided high tensile strength in the presence of heavy bleeding.*¹⁵

SURGICEL™ NU-KNIT™ Absorbable Hemostat

36% faster time to haemostasis (TTH) than SURGICEL™ Original Absorbable Hemostat^{^†16}

SURGICEL™ NU-KNIT™ offers high tensile strength in heavy oozing bleeding situations**¹⁷

New code	size
1940SK	1.25cm x 5cm
1942SK	5cm x 7.5cm
1943SK	7.5cm x 10cm

A versatile option for controlling oozing bleeding at multiple sites¹⁴

SURGICEL™ FIBRILLAR™ Absorbable Hemostat

39% average faster time to hemostasis compared to SURGICEL™ Original Absorbable Hemostat^{‡18}

One layer of SURGICEL™ FIBRILLAR™ is more effective[≤] at achieving haemostasis than 4 layers of SURGICEL™ Original^{19¥}

Lightweight layers of SURGICEL™ FIBRILLAR™ can be pulled apart for precise placement around bleeding site²⁰

Based on on US data from Jan 2011 - Dec 2012, SURGICEL™ Fibrillar and SURGICEL™ SNoW™ were associated with lower hospital resource use compared to SURGICEL™ Original Absorbable Hemostat⁺²¹

New code	size
411961	2.5cm x 5.1cm
411962	5.1cm x 10.2cm
411963	10.2cm x 10.2cm

*Average dry tensile strength was 34.680lbs.
Average wet tensile strength was 9.679lbs

[^]vs SURGICEL™ NU-KNIT as shown in animal models
[‡]vs SURGICEL™ Fibrillar as shown in animal models
^{**}3 x higher than SURGICEL™ Original

[‡]Based on pre - clinical testing on animal models and clinical effect is unknown

[¥]Demonstrated in animal models. Hemostat was applied in addition to gauze and applied digital pressure.
Pre - clinical test data are not necessarily indicative of clinical performance

[≤]Reduced median time to hemostasis.

⁺Based on a retrospective analysis of the US Premier hospital database from which adults who underwent brain/cerebral (BC), cardiovascular (CV: valve surgery and coronary artery bypass graft) and carotid endarterectomy (CEA) between January 2011–December 2012 were identified and those treated with Surgicel advanced products (SAPs, SURGICEL™ Fibrillar and SURGICEL™ SNoW™) were compared to those treated with Surgicel Original (SO). Following Propensity Score Matching (PSM), patients that received SAPs had a 14–16% lower mean LOS for each procedure compared to SO (P-Value <0.02 for all results), as well as 12–18% lower total mean cost per discharge for each procedure (P-Value <0.02 for all results).

Of the SURGICEL™ Family of Hemostats, SURGICEL™ SNoW is the preferred choice for minimally invasive procedures (MIPs) due to its structured integrity and ease of use.*22

SURGICEL™ SNoW™
Absorbable Hemostat

43% faster time to hemostasis compared to SURGICEL™ Original^{§ 23}

One layer of SURGICEL™ SNoW™ is more effective^ at achieving haemostasis than 4 layers of SURGICEL™ Original²⁴

Smart design that retains its shape for better handling and comfortability**25

New code	size
2091	2.5cm x 5.1cm
2092	5.1cm x 10.2cm
2093	10.2cm x 10.2cm

One-of-a-kind powder innovation and delivery device provides consistent* broad surface coverage and clinical performance^{±26}

SURGICEL™ Powder
Absorbable Hemostat

Preclinical animal study suggests that SURGICEL™ Powder Absorbable Haemostat provides 52% faster time to haemostasis than SURGICEL™ Original Absorbable Haemostat²⁷

SURGICEL™ Powder Absorbable Haemostat has been shown to form more adherent and durable clot at the bleeding site than ARISTA™ AH Absorbable Hemostatic Particles^{28±}

Oxidized regenerated cellulose (ORC) in powder form allows for efficient coverage of broad surfaces surfaces²⁹

SURGICEL™ Powder penetrates the surface of the blood, while ARISTA™ AH Absorbable Hemostatic Particles are more likely to float on its surface^{30±}

SURGICEL™ Powder sustains hemostasis at 90% of treatment sites even when irrigated^{31π}

New code	size
3133SPEA	Laparoscopic Tip
3023SP	3 grams

*57% of Surgeons believe SURGICEL™ SNoW is quicker and easier to apply endoscopically than SURGICEL™ Fibrillar. 57% is (3/14 strongly agree and 5/14 agree and 5/14 agree)
§Based on pre-clinical testing on animal models and clinical effect is unknown

^Reduced time to successfully achieve haemostasis under controlled conditions in a porcine splenic incision model. The ORC devices were applied in addition to gauze and the application of digital pressure. Based on pre - clinical testing on animal models and clinical effect is unknown

**Compared to SURGICEL Original

±ORC aggregates penetrates through the blood to stop bleeding at the source. Based on pre - clinical testing on animal models and clinical effect is unknown

¥The amount of powder delivered with each puff and device orientation

±Compared to Arista™ and PerClot®

πPivotal study comparing performance of SURGICEL™ Powder to SURGICEL™ Original in a swine acute liver abrasion model

±Durability of hemostasis was assessed by determining whether SURGICEL™ Powder or the comparators were able to achieve effective hemostasis at a bleeding defect site and remain hemostatic after saline irrigation and wiping with a gauze sponge. SURGICEL™ Powder applications achieved durable hemostasis at 67% of the defect sites tested and was significantly superior (p<0.001) to Arista AH, which achieved 0% durable hemostasis. Based on pre - clinical testing on animal models and clinical effect is unknown

±Based on surface area and surface energy analyses using inverse gas chromatography in benchtop testing and in vitro data

πBased on pre - clinical testing on animal models and clinical effect is unknown

SPONGOSTAN™ Absorbable Gelatin Sponge

Gelatin sponge for hemostatic use

SPONGOSTAN™ Absorbable Haemostatic Gelatin Sponge is a sterile, water-insoluble, malleable, porcine gelatin absorbable sponge intended for haemostatic use by applying to a bleeding surface.

When used in appropriate amounts SPONGOSTAN™ Sponge is absorbed completely within 4 to 6 weeks.

When applied to bleeding mucosal regions, it liquefies within 2 to 5 days.

DERMABOND™

Skin Closure System

DERMABOND™

DERMABOND™ PRINEO™ Skin Closure System (22 cm)

Strength and protection for wound closure

For illustrative purposes only

Introducing DERMABOND™ PRINEO™ Skin Closure System (22 cm)

For illustrative purposes only

DERMABOND™ PRINEO™ Skin Closure System

- DERMABOND™ PRINEO™ Skin Closure System is a non invasive alternative for skin closure^{32*†}
- Combines the proven strength, flexibility, and microbial barrier of DERMABOND™ ADVANCED™ Topical Skin Adhesive with the added support and security of a self - adhering mesh to further facilitate both wound - edge approximation and an optimal healing environment^{33**}.
- DERMABOND™ PRINEO™ Skin Closure System remains on the skin for 7 to 14 days throughout the normal healing period, after which the product can be removed or will slough off naturally

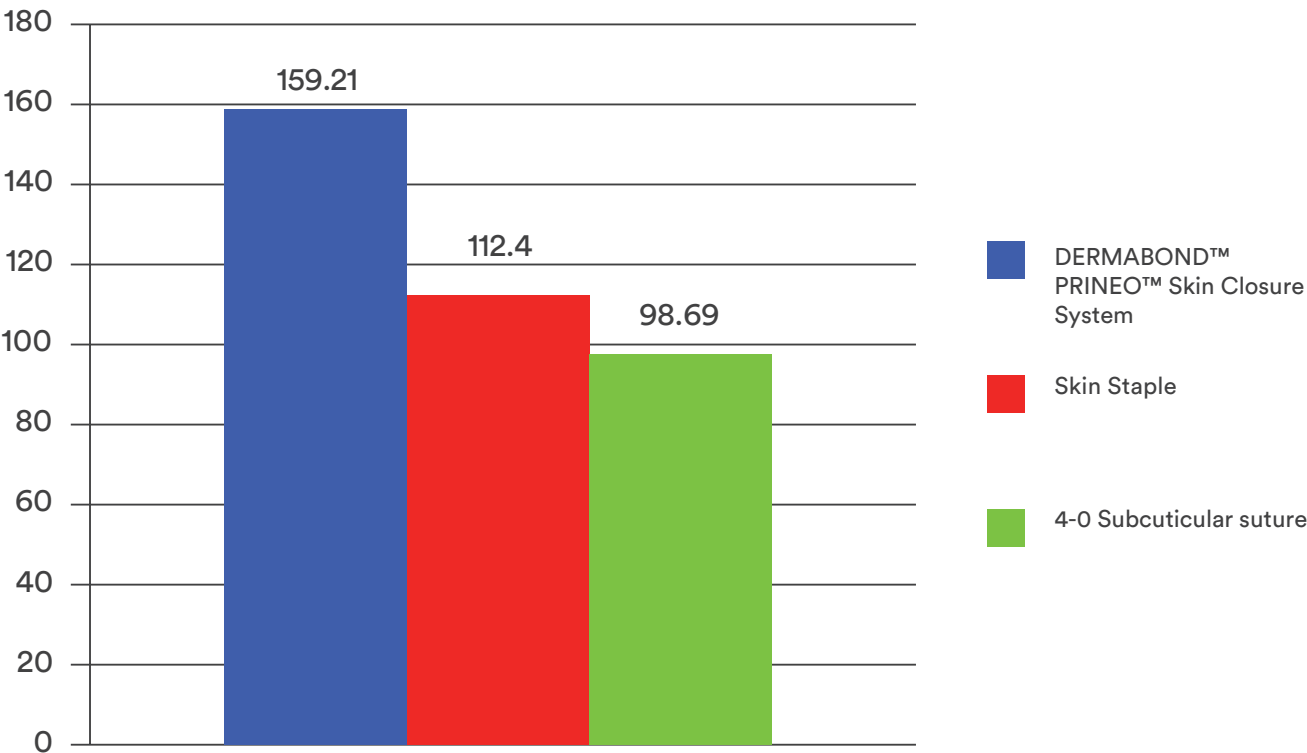

*Deep dermal stitches required

†Based on benchtop testing and clinical effect in unknown

**As long as the adhesive film remains intact. Clinical studies were not conducted to demonstrate microbial barrier properties

DERMABOND™ PRINEO™ Skin Closure System was shown to provide statistically significant greater skin holding strength than skin staples or subcuticular 4 - 0 MONOCRYL™ (poliglecaprone 25) suture.*†‡34

Greater skin holding strength than staples or subcuticular suture**‡35

- Incisions closed with DERMABOND™ PRINEO™ Closure System (22 cm) were significantly stronger when compared with the average strength of staples^#36
- Incisions closed with DERMABOND™ PRINEO™ Skin Closure System (22 cm) were stronger when compared with the average strength of 4-0 suture^^&37

*In an ex-vivo study, more load in N was required to create a 3±1 mm gap between skin edges approximated with DERMABOND™ PRINEO™ System, than with subcuticular 4-0 MONOCRYL™ Suture or PROXIMATE Ethicon Endo-Surgery skin staples (p 0.00).
†Based on benchtop testing and clinical effect is unknown

^Study performed ex vivo. P value 0.00. Average maximum load at or prior to 3 ± 1 mm gap between the approximated tissues.
#Based on benchtop testing and clinical effect

^^Study performed ex vivo. P value 0.00. Average maximum load at or prior to 3 ± 1 mm gap between the approximated tissues.
&Based on benchtop testing and clinical effect is unknown

DERMABOND™ Portfolio

A comprehensive portfolio for a wide range of skin-closure applications

DERMABOND™ Mini Topical Skin Adhesive

- Small laceration
- Minimally invasive procedure

DERMABOND ADVANCED™ Topical Skin Adhesive

- Open hernia repair
- Medium to large laceration

DERMABOND™ PRINEO™ Skin Closure System provided a flexible microbial barrier with 98.43% protection in vitro for 72 hours against organisms commonly responsible for SSIs.*†14

DERMABOND™ PRINEO™
Skin Closure System (22 cm)

- Orthopedics
- Joint reconstruction
- Spine surgery

DERMABOND™ PRINEO™
Skin Closure System (60 cm)

- Abdominoplasty
- Breast reconstruction
- Sternotomy
- Brachioplasty

*Staphylococcus epidermidis, Escherichia coli, Staphylococcus aureus, Pseudomonas aeruginosa, and Enterococcus faecium.

†Pre - clinical test data are not necessarily indicative of clinical performance

**As shown in vitro for 72 hours against organisms commonly responsible for SSIs, Staphylococcus epidermidis, Escherichia coli, Staphylococcus aureus, Pseudomonas aeruginosa, and Enterococcus faecium

BLAKE™ Silicone Drains

J-VAC™ Closed Wound Drainage System

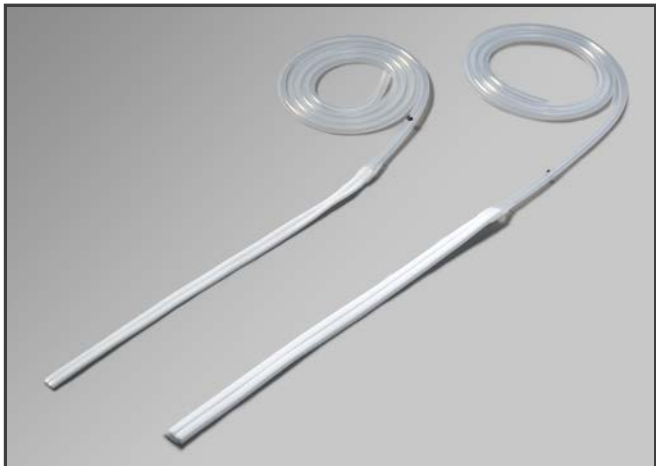

The J-VAC™ Closed Wound Drainage System is a sterile, disposable, portable system used for closed wound drainage. It consists of two component parts: J-VAC™ Reservoirs and BLAKE™ Silicone Suction Drains.

1. BLAKE™ Silicone Drains (Flat, Full, or 3/4-Fluted)
2. BLAKE™ Silicone Drains (Round Hubless)
3. J-VAC™ Reservoirs – Sterile
4. J-VAC™ Bulb Suction Reservoir – Sterile
5. J-VAC™ Adapters – Sterile
6. BLAKE™ Cardio Connectors – Sterile

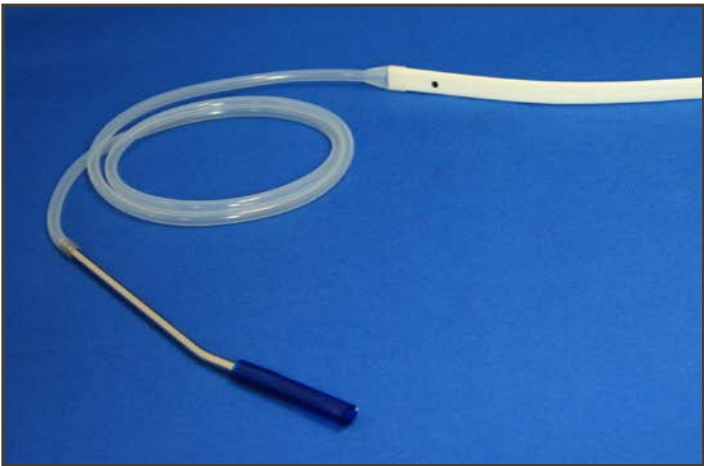

BLAKE™ Silicone Drains (Flat, Full, or 3/4-Fluted)

The product consists of a radiopaque flat silicone drain with four channels along the sides, a round silicone extension tube, and an adapter. The flat drain is channeled along either 75% or 100% of its length. Flat drains are available with or without a trocar.

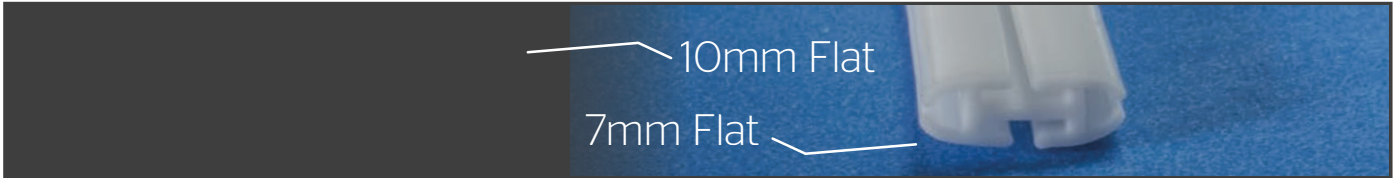

7mm Full-Fluted Flat Drain (Product Code 2211) - LEFT
10mm Full-Fluted Flat Drain (Product Code 2214) - RIGHT

10mm 3/4-Fluted Flat Drain with 3/16" Trocar (Product Code 2217)

Product Code	Size	Drain Type	Trocar	Quantity/Box
2210	7 mm	3/4 Fluted	-	10
2213	10 mm	3/4 Fluted	-	10
2214	10 mm	Full Fluted	-	10
2215	10 mm	Full Fluted	3/16"	10

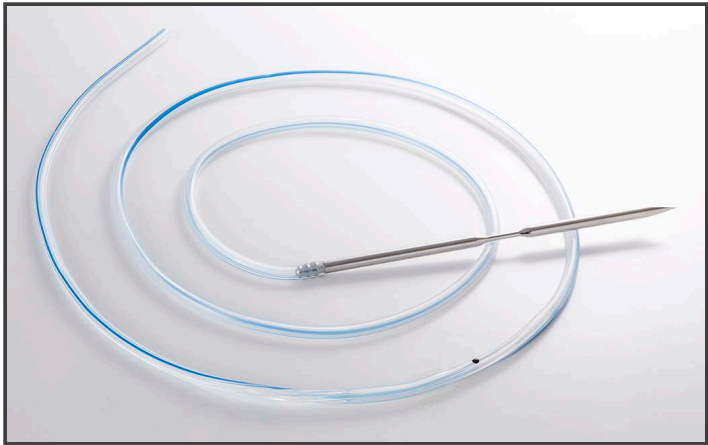

BLAKE™ Silicone Drains (Round Hubless)

The product consists of a silicone drain with four channels along the sides, a blue radiopaque stripe along the length of the drain, a round silicone extension tube, and an adapter. It is available with or without a trocar.

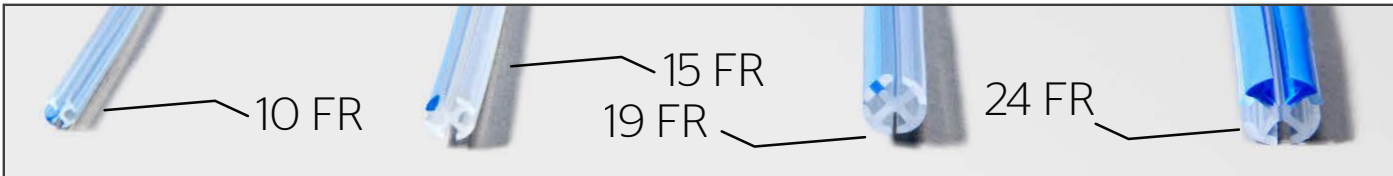

24 FR Round (Product Code 2234)

19FR Round with Bendable Trocar (Product Code 2232)

Product Code	Size	Drain Type	Trocar Size	Trocar Type	Quantity/Box
2226	10 FR	Round	–	–	10
2227	10 FR	Round	1/8"	–	10
2228	15 FR	Round	–	–	10
2229	15 FR	Round	3/16"	–	10
2233	15 FR	Round	3/16"	Bendable	10
2230	19 FR	Round	–	–	10

2232	19 FR	Round	1/4"	Bendable	10
2234	24 FR	Round	–	–	10

J-VAC™ Reservoirs – Sterile

The J-VAC™ Reservoir is available in either a 150 ml, 300 ml, or 450 ml size. All are packaged sterile in a pre-compressed state and are capable of dual drainage. A standard anti-reflux valve has also been incorporated to help prevent the reverse flow of wound exudates during emptying and reactivation. Markers are provided at increments along the side of the reservoir to facilitate the approximate measurement of fluid. A drain port with attached plug is provided as a method of emptying exudate collected by the unit.

Code	Size	Description	Quantity/Unit
2161	150 ml	J-VAC™ Reservoir	10
2162	450 ml	J-VAC™ Reservoir	10
2163	300 ml	J-VAC™ Reservoir	10

J-VAC™ Bulb Suction Reservoir – Sterile

The J-VAC™ Bulb Suction Reservoir is available in 100 cc size. It is packaged sterile and has a standard anti-reflux valve. Markers are provided at increments along the side of the reservoir to facilitate the approximate measurement of fluid. A drain port with an attached plug is provided as a method of emptying exudate collected by the unit.

Code	Size	Description	Quantity/Unit
